<b>Foreword</b>	<b>v</b>
<i>Michel Loreau</i>	
<b>Contributors</b>	<b>ix</b>
<b>Introduction</b>	<b>1</b>
<i>Andrea Belgrano</i>	
<b>PART I Structure and function</b>	<b>5</b>
<b>1 Biosimplicity via stoichiometry: the evolution of food-web structure and processes</b>	<b>7</b>
<i>James J. Elser and Dag O. Hessen</i>	
<b>2 Spatial structure and dynamics in a marine food web</b>	<b>19</b>
<i>Carlos J. Melián, Jordi Bascompte, and Pedro Jordano</i>	
<b>3 Role of network analysis in comparative ecosystem ecology of estuaries</b>	<b>25</b>
<i>Robert R. Christian, Daniel Baird, Joseph Luczkovich, Jeffrey C. Johnson, Ursula M. Scharler, and Robert E. Ulanowicz</i>	
<b>4 Food webs in lakes—seasonal dynamics and the impact of climate variability</b>	<b>41</b>
<i>Dieter Strale</i>	
<b>5 Pattern and process in food webs: evidence from running waters</b>	<b>51</b>
<i>Guy Woodward, Ross Thompson, Colin R. Townsend, and Alan G. Hildrew</i>	
<b>PART II Examining food-web theories</b>	<b>67</b>
<b>6 Some random thoughts on the statistical analysis of food-web data</b>	<b>69</b>
<i>Andrew R. Solow</i>	
<b>7 Analysis of size and complexity of randomly constructed food webs by information theoretic metrics</b>	<b>73</b>
<i>James T. Morris, Robert R. Christian, and Robert E. Ulanowicz</i>	
<b>8 Size-based analyses of aquatic food webs</b>	<b>86</b>
<i>Simon Jennings</i>	
	<b>vii</b>

<b>9 Food-web theory in marine ecosystems</b>	<b>98</b>
<i>Jason S. Link, William T. Stockhausen, and Elizabeth T. Mehrtens</i>	
<b>PART III Stability and diversity in food webs</b>	<b>115</b>
<b>10 Modeling food-web dynamics: complexity–stability implications</b>	<b>117</b>
<i>Jennifer A. Dunne, Ulrich Brose, Richard J. Williams, and Neo D. Martínez</i>	
<b>11 Is biodiversity maintained by food-web complexity?—the adaptive food-web hypothesis</b>	<b>130</b>
<i>Mitchio Kondoh</i>	
<b>12 Climate forcing, food web structure, and community dynamics in pelagic marine ecosystems</b>	<b>143</b>
<i>L. Ciannelli, D. Ø. Hjermann, P. Lehodey, G. Ottensen, J. T. Duffy-Anderson, and N. C. Stenseth</i>	
<b>13 Food-web theory provides guidelines for marine conservation</b>	<b>170</b>
<i>Etric Sala and George Sugihara</i>	
<b>14 Biodiversity and aquatic food webs</b>	<b>184</b>
<i>Helmut Hillebrand and Jonathan B. Shurin</i>	
<b>PART IV Concluding remarks</b>	<b>199</b>
<b>15 Ecological network analysis: an escape from the machine</b>	<b>201</b>
<i>Robert E. Ulanowicz</i>	
<b>Afterword</b>	<b>208</b>
<i>Mathew A. Leibold</i>	
<b>References</b>	<b>211</b>
