Preface	vii
Acknowledgments	viii
Executive Summary	1
1. Introduction to climate change and water	5
1.1 Background	7
1.2 Scope	7
1.3 The context of the Technical Paper: socio-economic and environmental conditions	8
1.3.1 Observed changes	8
1.3.2 Projected changes	9
1.4 Outline	11
2. Observed and projected changes in climate as they relate to water	13
2.1 Observed changes in climate as they relate to water	15
2.1.1 Precipitation (including extremes) and water vapour	15
2.1.2 Snow and land ice	19
2.1.3 Sea level	20
2.1.4 Evapotranspiration	20
2.1.5 Soil moisture	21
2.1.6 Runoff and river discharge	21
2.1.7 Patterns of large-scale variability	22
2.2 Influences and feedbacks of hydrological changes on climate	23
2.2.1 Land surface effects	23
2.2.2 Feedbacks through changes in ocean circulation	24
2.2.3 Emissions and sinks affected by hydrological processes or biogeochemical feedbacks	24
2.3 Projected changes in climate as they relate to water	24
2.3.1 Precipitation (including extremes) and water vapour	25
2.3.2 Snow and land ice	27
2.3.3 Sea level	28
2.3.4 Evapotranspiration	29
2.3.5 Soil moisture	29
2.3.6 Runoff and river discharge	29
2.3.7 Patterns of large-scale variability	31
3. Linking climate change and water resources: impacts and responses	33
3.1 Observed climate change impacts	35
3.1.1 Observed effects due to changes in the cryosphere	35
3.1.2 Hydrology and water resources	35
3.2 Future changes in water availability and demand due to climate change	38
3.2.1 Climate-related drivers of freshwater systems in the future	38
3.2.2 Non-climatic drivers of freshwater systems in the future	43

3.2.3	Impacts of climate change on freshwater availability in the future	44
3.2.4	Impacts of climate change on freshwater demand in the future	44
3.2.5	Impacts of climate change on water stress in the future	45
3.2.6	Impacts of climate change on costs and other socio-economic aspects of freshwater	45
3.2.7	Freshwater areas and sectors highly vulnerable to climate change	47
3.2.8	Uncertainties in the projected impacts of climate change on freshwater systems	47
3.3	Water-related adaptation to climate change: an overview	48
4.	Climate change and water resources in systems and sectors	53
4.1	Ecosystems and biodiversity	55
4.1.1	Context	55
4.1.2	Projected changes in hydrology and implications for global biodiversity	55
4.1.3	Impacts of changes in hydrology on major ecosystem types	55
4.2	Agriculture and food security, land use and forestry	59
4.2.1	Context	59
4.2.2	Observations	60
4.2.3	Projections	60
4.2.4	Adaptation, vulnerability and sustainable development	63
4.3	Human health	67
4.3.1	Context	67
4.3.2	Observations	69
4.3.3	Projections	69
4.3.4	Adaptation, vulnerability and sustainable development	69
4.4	Water supply and sanitation	69
4.4.1	Context	69
4.4.2	Observations	69
4.4.3	Projections	70
4.4.4	Adaptation, vulnerability and sustainable development	71
4.5	Settlements and infrastructure	73
4.5.1	Settlements	73
4.5.2	Infrastructure	73
4.5.3	Adaptation	74
4.6	Economy: insurance, tourism, industry, transportation	74
4.6.1	Context	74
4.6.2	Socio-economic costs, mitigation, adaptation, vulnerability, sustainable development	75
5.	Analysing regional aspects of climate change and water resources	77
5.1	Africa	79
5.1.1	Context	79
5.1.2	Current observations	79
5.1.3	Projected changes	81
5.1.4	Adaptation and vulnerability	85
5.2	Asia	85
5.2.1	Context	85
5.2.2	Observed impacts of climate change on water	85
5.2.3	Projected impact of climate change on water and key vulnerabilities	87
5.2.4	Adaptation and vulnerability	88
5.3	Australia and New Zealand	90
5.3.1	Context	90

5.3.2	Observed changes	90
5.3.3	Projected changes	91
5.3.4	Adaptation and vulnerability	92
5.4	Europe	93
5.4.1	Context	93
5.4.2	Observed changes	93
5.4.3	Projected changes	93
5.4.4	Adaptation and vulnerability	95
5.5	Latin America	96
5.5.1	Context	96
5.5.2	Observed changes	96
5.5.3	Projected changes	98
5.5.4	Adaptation and vulnerability	100
5.6	North America	102
5.6.1	Context and observed changes	102
5.6.2	Projected change and consequences	102
5.6.3	Adaptation	104
5.7	Polar regions	106
5.7.1	Context	106
5.7.2	Observed changes	107
5.7.3	Projected changes	108
5.7.4	Adaptation and vulnerability	109
5.8	Small islands	109
5.8.1	Context	109
5.8.2	Observed climatic trends and projections in island regions	109
5.8.3	Adaptation, vulnerability and sustainability	111
6.	Climate change mitigation measures and water	115
6.1	Introduction	117
6.2	Sector-specific mitigation	117
6.2.1	Carbon dioxide capture and storage (CCS)	117
6.2.2	Bio-energy crops	117
6.2.3	Biomass electricity	119
6.2.4	Hydropower	119
6.2.5	Geothermal energy	119
6.2.6	Energy use in buildings	119
6.2.7	Land-use change and management	119
6.2.8	Cropland management (water)	120
6.2.9	Cropland management (reduced tillage)	120
6.2.10	Afforestation or reforestation	120
6.2.11	Avoided/reduced deforestation	121
6.2.12	Solid waste management; wastewater treatment	121
6.2.13	Unconventional oil	122
6.3	Effects of water management policies and measures on GHG emissions and mitigation	122
6.3.1	Hydro dams	122
6.3.2	Irrigation	122
6.3.3	Residue return	122
6.3.4	Drainage of cropland	123

6.3.5 Wastewater treatment	123
6.3.6 Desalination	124
6.3.7 Geothermal energy	124
6.4 Potential water resource conflicts between adaptation and mitigation	124
7. Implications for policy and sustainable development	125
7.1 Implication for policy by sector	127
7.2 The main water-related projected impacts by regions	128
7.3 Implications for climate mitigation policy	130
7.4 Implications for sustainable development	130
8. Gaps in knowledge and suggestions for further work	133
8.1 Observational needs	135
8.2 Understanding climate projections and their impacts	135
8.2.1 Understanding and projecting climate change	135
8.2.2 Water-related impacts	136
8.3 Adaptation and mitigation	136
