

Contents

Preface to the First Edition	ix
Preface to the Second Edition	xi
Contributors	xiii
1 The Relationship Between Genotype and Phenotype: Some Basic Concepts	1
<i>Philip Stanier and Gudrun Moore</i>	
Introduction	1
The relationship between genotype and phenotype	2
The role of 'model' systems	8
The changing concept of homology	9
2 Uses of Databases in Dysmorphology	19
<i>Michael Baraitser</i>	
What is a syndrome?	19
Some of these problems are addressed by dysmorphology databases	20
Where databases do not help	23
Dysmorphology databases	25
How databases work	26
3 Human Cytogenetics	33
<i>J. D. A. Delhanty</i>	
Introduction	33
Population cytogenetics	34
Structural anomalies	35
The genesis of chromosome abnormalities	36
Embryo survival	44
The cause of high levels of chromosome abnormality in human embryos	44
Relative parental risks – age, translocations, inversions, gonadal and germinal mosaics	45
4 Identification and Analysis of Genes Involved in Congenital Malformation Syndromes	51
<i>Peter J. Scambler</i>	
Gene identification	51
Biological analysis of genes implicated in birth defect syndromes	59

Animal models	64
Why study rare human birth defect syndromes?	70
5 Transgenic Technology and Its Role in Understanding Normal and Abnormal Mammalian Development	79
<i>Valerie Vidal and Andreas Schall</i>	
Introduction	79
Transgenic mice	80
Genetic manipulation using gene targeting in ES cells	88
Outlook and future developments	95
6 Chemical Teratogens: Hazards, Tools and Clues	99
<i>Nigel A. Brown (with revisions by Cheryl Tickle)</i>	
Introduction	99
Teratogens and human malformations	100
General strategy in chemical teratogenesis	102
Valproic acid	102
Gene-teratogen interaction	106
Teratogens and phenocopies	106
Teratogens as manipulative tools	108
Teratogens as clues	110
Final comments	117
7 The Limbs	123
<i>Patrizia Ferretti and Cheryl Tickle</i>	
Developmental anatomy of the human limb	123
Main classes of limb defects	125
Contemporary studies on mechanisms of limb development	127
Limb regeneration	140
How, when, and where experimental studies elucidate abnormal development	145
Agenda for the future	151
8 Brain and Spinal Cord	167
<i>Andrew J. Copp</i>	
Introduction	167
Overview of nervous system development	169
Defects of CNS development: towards a genetic and developmental understanding	175
Agenda for the future	192
9 Birth Defects Affecting the Eye	199
<i>Jane C. Sowden</i>	
The eye	199
Development of the eye	200
Congenital eye defects and paediatric blindness	204

Gene mutations underlying congenital eye defects	205
Cellular and molecular mechanisms affecting eye development and how they elucidate the causes of abnormal development	213
Agenda for the future	220
10 The Ear	231
<i>Sarah L. Spiden and Karen P. Sted</i>	
Introduction	231
Development of the outer and middle ear	233
Development of the inner ear	234
Main classes of ear defects	236
Mechanisms involved in development of the outer and middle ear	248
Mechanisms underlying inner ear development	249
Mechanisms underlying development of inner ear sensory epithelia	251
Mechanisms involved in endolymph homeostasis	253
The future	254
11 Development of the Enteric Nervous System in Relation to Hirschsprung's Disease	263
<i>Heather M. Young, Donald F. Newgreen and Alan J. Burns</i>	
Introduction	263
Anatomy and function of the ENS	263
The best-characterized developmental defect of the ENS – Hirschsprung's disease	265
Cell biology of ENS development	266
Molecular biology of ENS development and Hirschsprung-like dysplasias	270
HSCR: current and future treatments	286
Conclusions	288
12 The Head	301
<i>Gillian M. Morriss-Kay</i>	
Introduction	301
Developmental anatomy	302
Main classes of craniofacial defect	317
Cellular and molecular mechanisms	321
Agenda for the future	332
13 The Heart	341
<i>Deborah Henderson, Mary R. Hutson and Margaret L. Kirby</i>	
Developmental anatomy	341
Major cell populations needed for heart development	345
Molecular regulation of heart development	347
Cardiovascular defects	356
The future	362
14 The Skin	373
<i>Ahmad Waseem and Irene M. Leigh</i>	
Introduction	373

Developmental anatomy	374
Main classes of skin defects	391
Future perspectives	400
15 The Vertebral Column	411
<i>David Rice and Susanne Dietrich</i>	
Introduction	411
Developmental anatomy of the vertebral column	414
Making the vertebral column	421
Agenda for the future	444
16 The Kidney	463
<i>Paul J. D. Winyard</i>	
Introduction	463
Structure and function	464
Developmental anatomy of nephrogenesis	465
Transcription factors	473
Growth factors and their receptors	479
Survival/proliferation factors	487
Cell adhesion molecules	488
Other molecules	492
Non-genetic causes of renal malformations	492
Agenda for the future	495
Conclusion	499
17 The Teeth	515
<i>Irma Thesleff</i>	
Developmental anatomy	515
Main classes of defects	517
Cellular and molecular mechanisms affecting development	520
How cellular and molecular developmental mechanisms assist in elucidating the causes of abnormal development	525
Agenda for the future	529
Index	537
