

Contents

1 Proteins: Introduction to Proteins and the Biochemistry of Muscle, 1

- Basics of Protein Structure, 1*
- Proteins of Muscle, 9*
- Biochemistry of Muscle Contraction, 14*
- Cardiac Muscle Compared with Voluntary Muscle, 22*
- The Heart and Ion Transport, 23*
- Smooth Muscle: Comparison with Striated Muscle, 27*
- Nitric Oxide, 30*
- Energy Supplies and Muscle Contraction, 31*

2 Biochemistry of Plasma Proteins, 35

- Characteristics of Plasma Proteins, 39*
- Albumin, Oncotic Pressure, and Edema, 41*
- Transport Functions of Plasma Proteins, 44*
- Lipoproteins, Lipid Transport, and Atherosclerosis, 57*

3 Enzymes, 67

- Properties of Enzymes, 68*
- Enzyme Classification and Nomenclature, 79*
- Measurement of Enzyme Activity (Enzyme Assays), 82*
- Enzyme Rate and End-Point Analysis, 91*
- Modulation of Enzyme Activity by Drugs, 93*
- Diagnostic Enzymology, 93*
- Use of Enzymes as Therapeutic Agents, 101*

4 Hemostasis, 103

- Coagulation Pathways, 103*
- Inhibition of Coagulation, 109*
- Antibodies to Coagulation Factors, 111*
- Thrombophilia, 112*
- Therapeutic Anticoagulants, 112*
- Hemophilia A and B, 113*
- Fibrin Polymerization and Clot Formation, 114*
- Fibrinolysis, 116*
- Clot Busters and Therapies for Clot Lysis, 120*
- Platelets in Hemostasis and Thrombosis, 122*

5 Hemoglobin, Porphyrins, and Jaundice, 135

- Structure of Hemoglobin and Oxygen Binding, 135*

Regulation of Oxygen Binding to Hemoglobin, 144
Disorders of Hemoglobin (Hemoglobinopathies), 150
Biosynthesis of Heme and the Porphyrins, 156
Heme Breakdown, Bilirubin, and Jaundice, 163

6 Vitamin B₁₂, Folic Acid, and Megaloblastic Anemia, 175

Vitamin B₁₂, 176
Folic Acid, 186

7 Metabolism, 195

Digestion and Metabolism, 199
Enzymes and Disease, 200
An Overview of Metabolic Pathways, 202
Regulation of Metabolism, 206
Bioenergetics, 218
Carbohydrate Metabolism, 221
Fat Metabolism, 236
Protein Metabolism, 247

8 Recombinant DNA Technology and its Application to Medicine, 255

Structure of DNA, 256
More Complex Configurations of DNA, 261
Structural Elements Found Within DNA, 263
Mitochondrial DNA, 265
Ribonucleic Acid, 266
Eukaryotic Genes, mRNA, and Transcription, 266
Recombinant DNA (rDNA) Techniques, 271
Restriction Enzymes, 273
Molecular Cloning, 276
Probes in rDNA Technology, 281
Blotting Techniques and the Points of the Compass, 284
Polymerase Chain Reaction, 287
Somatic Cell Hybridization, In Situ Hybridization, and Fluorescence In Situ Hybridization, 290
The Hunt for Disease Genes, 291
Restriction Fragment Length Polymorphisms, 293
The Human Genome Project and the Positional Candidate Approach, 299
Related rDNA Technologies, 301
Future Directions, 303
