

Contents

Abbreviations	xi
1 Introduction: DNA Microarrays – Ten Years Old, but no Old Hat	1
<i>Falk Hertwig and Ulrike A Nuber</i>	
1.1 How to perform a microarray experiment	3
2 cDNA Microarray Analysis and its Role in Toxicology – a Case Study	7
<i>Alexandra N Heinloth, Gary A Boorman and Richard S Paules</i>	
2.1 Introduction	7
2.2 Gene expression profiling reveals indicators of potential adverse effects	10
2.3 cDNA microarrays – curse or blessing?	13
2.4 The future of toxicogenomics – prediction of toxicity	13
Protocol 2.1: In-life study	17
Protocol 2.2: Gene expression analysis	19
Protocol 2.3: Clinical pathology	21
Protocol 2.4: Histopathology	22
Protocol 2.5: Electron microscopy	23
Protocol 2.6: ATP measurements	24
3 Gene Expression Profiling in Plants Using cDNA Microarrays	25
<i>Motoaki Seki, Junko Ishida, Maiko Nakajima, Akiko Enju, Ayako Kamei, Youko Oono, Mari Narusaka, Masakazu Satou, Tetsuya Sakurai and Kazuo Shinozaki</i>	
3.1 Introduction	25
3.2 Gene expression profiling methods	25
3.3 DNA microarrays: cDNA and oligonucleotide microarrays	27
3.4 cDNA clones and their application for cDNA microarray analysis	27
Protocol 3.1: Preparation of cDNA microarrays	32
Protocol 3.2: Preparation of cDNA targets	34
Protocol 3.3: Microarray hybridization and scanning	37
Protocol 3.4: Data analysis	38

4	Identification of Gene Expression Patterns for a Molecular Diagnosis of Kidney Tumors	39
	<i>Holger Sültmann, Andreas Buneß, Markus Ruschhaupt, Wolfgang Huber, Ruprecht Kuner, Bastian Gunawan, Laszlo Füzesi and Annemarie Poustka</i>	
4.1	Introduction	39
4.2	Experimental design	40
4.3	Molecular classification of kidney tumors	40
4.4	Building a classifier for kidney tumor diagnosis	41
4.5	Summary	42
	Protocol 4.1: Tissue samples and RNA isolation	46
	Protocol 4.2: Microarray experiments	47
	Protocol 4.3: RNA labeling and hybridization	48
	Protocol 4.4: Signal quantification and data analysis	49
5	Gene Expression Analysis of Differentiating Neural Progenitor Cells – a Time Course Study	51
	<i>Ulf Gurok and Ulrike A Nuber</i>	
5.1	Introduction	51
5.2	The experiment	51
5.3	Summary	53
	Protocol 5.1: Microarray production	56
	Protocol 5.2: Cell culture and RNA preparation	58
	Protocol 5.3: Hybridization, washing and scanning	59
	Protocol 5.4: Data processing	62
	Protocol 5.5: Cluster analysis	63
6	A Microarray-Based Screening Method for Known and Novel SNPs	65
	<i>Ena Wang and Francesco M Marincola</i>	
6.1	Introduction	65
6.2	High resolution SNP detection methods	66
6.3	High throughput methods for SNP detection	66
6.4	Screening methods for known and unknown SNPs	67
6.5	Summary	70
	Protocol 6.1: Target preparation	76
7	From Gene Chips to Disease Chips – New Approach in Molecular Diagnosis of Eye Diseases	83
	<i>Rando Allikmets and Jana Zernant</i>	
7.1	Introduction	83
7.2	APEX – arrayed primer extension	84
7.3	Application A – the gene array for ABCA4-associated retinal dystrophies	85
7.4	Application B – the ‘disease array’ for a genetically heterogeneous disorder (LCA)	88
7.5	Summary	90
	Protocol 7.1: Template preparation	95

8	Multiplexed SNP Genotyping Using Allele-Specific Primer Extension on Microarrays	97
	<i>Juha Saharinen, Pekka Ellonen, Janna Saarela and Leena Peltonen</i>	
8.1	Introduction	97
8.2	Practical approach on microarray-based allele-specific primer extension	99
8.3	Data analysis – allele calling and genotype assignment	105
8.4	Summary	107
9	Profiling the <i>Arabidopsis</i> Transcriptome	111
	<i>Lars Hennig</i>	
9.1	Introduction	111
9.2	MIAME/Plant – documentation of the experiment	112
9.3	RNA extraction	112
9.4	Labeling	112
9.5	Hybridization	112
9.6	Washing, staining and scanning	113
9.7	Data pre-processing and data analysis	113
9.8	Useful tips	113
9.9	Summary	114
	Protocol 9.1: RNA extraction	118
	Protocol 9.2: Labeling	119
	Protocol 9.3: Hybridization	121
	Protocol 9.4: Washing, staining and scanning	123
10	Affymetrix GeneChip Analyses – the Impact of RNA Quality	125
	<i>Ludger Klein-Hitpass and Tarik Möröy</i>	
10.1	Introduction	125
10.2	Aim and experimental design	128
10.3	Statistics of RNA and array quality parameters	128
10.4	Comparison of signal measures computed by different array normalization procedures in control and degraded samples	129
10.5	SAM of degraded versus control RNA	131
10.6	Summary	132
	Protocol 10.1: Affymetrix GeneChip analyses	137
11	Molecular Karyotyping by Means of Array CGH: Linking Gene Dosage Alterations to Disease Phenotypes	139
	<i>Joris Veltman and Lisenka Vissers</i>	
11.1	Introduction	139
11.2	Array preparation, labeling, hybridization and data analysis	140
11.3	Molecular karyotyping in clinical genetics	141
11.4	Gene identification by array CGH	143
11.5	Summary	144
	Protocol 11.1: Clone preparation and array fabrication	150
	Protocol 11.2: Array CGH procedure	152
	Protocol 11.3: Hybridization and posthybridization procedure	155

12 DNA Microarrays: Analysis of Chromosomes and Their Aberrations	157
<i>Heike Fiegler, Susan M Gribble and Nigel Carter</i>	
12.1 Introduction	157
12.2 Array construction and application of genomic microarrays	157
12.3 Conclusion	162
Protocol 12.1: DOP PCR	165
Protocol 12.2: Aminolinking PCR	166
Protocol 12.3: DOP PCR amplification of flow-sorted chromosomes	167
Protocol 12.4: Random primed labeling of DNA for array CGH	168
Protocol 12.5: Array hybridization	169
13 Mapping Transcription Factor Binding Sites Using ChIP-Chip – General Considerations	171
<i>Rebecca Martone and Micheal Snyder</i>	
13.1 Introduction	171
13.2 Experimental approach	172
13.3 Experimental considerations	173
13.4 Data analysis	173
13.5 Array selection	174
13.6 Conclusion	177
14 ChIP-on-Chip: Searching For Novel Transcription Factor Targets	179
<i>Esteban Ballestar and Manel Esteller</i>	
14.1 Introduction	179
14.2 Genomic microarrays	180
14.3 Performing a successful ChIP assay	181
14.4 Obtaining material for hybridization	183
14.5 Labeling and hybridizing the DNA	183
14.6 Validating ChIP-on-chip results	184
14.7 Summary	184
Protocol 14.1: Performing a successful ChIP assay	188
15 Turning Photons into Results: Principles of Fluorescent Microarray Scanning	191
<i>Siobhan Picket and Damian Verdnik</i>	
15.1 Introduction	191
15.2 Scanning parameters	191
15.3 Analysis parameters	196
15.4 Normalization	199
16 Microarray Detection with Laser Scanning Device	203
<i>Ralph Beneke</i>	
16.1 Introduction	203
16.2 CCD or PMT?	203
16.3 Engineering of Tecan's LS series	205

17 Normalization Strategies for Microarray Data Analysis	215
<i>Christine Steinhoff and Martin Vingron</i>	
17.1 Introduction	215
17.2 Experimental data	217
17.3 Normalization methods	217
17.4 Scaling methods	218
17.5 Transformation methods	219
17.6 Application of normalization methods	221
17.7 Summary	223
18 Microarray Data Analysis: Differential Gene Expression	227
<i>Stefanie Scheid and Rainer Spang</i>	
18.1 Introduction	227
18.2 Getting started	227
18.3 Explorative analysis	230
18.4 Statistical analysis	235
18.5 Final remarks	238
19 Clustering and Classification Methods for Gene Expression Data Analysis	241
<i>Elizabeth Garrett-Mayer and Giovanni Parmigiani</i>	
19.1 Introduction	241
19.2 Clustering	242
19.3 Classification	248
19.4 Summary	252
20 Statistical Analysis of Microarray Time Course Data	257
<i>Yu Chaun Tai and Terence P Speed</i>	
20.1 Introduction	257
20.2 Design	260
20.3 Identifying the genes of interest	262
20.4 Clustering	272
20.5 Curve alignment	273
20.6 Software	273
20.7 Remarks	274
21 Array CGH Data Analysis	281
<i>Yuedong Wang and Sun-Wei Guo</i>	
21.1 Introduction	281
21.2 Summary	282
21.3 Concluding remarks	286
22 MIAME	291
<i>Robert Wagner</i>	
22.1 Introduction	291

22.2	The structure of MIAME	291
22.3	Array design description	292
22.4	Experiment description	293
Index		297

Colour plate section appears between pages 196 and 197
