<i>List of boxes</i>	ix
<i>Preface</i>	xi
1 What is Genetic Variation?	1
Deoxyribose nucleic acid: DNA	1
Ribose nucleic acid: RNA	5
What is the genetic code?	6
Protein structure	7
So what about chromosomes?	8
How does sexual reproduction produce variation?	11
Mitochondrial DNA	16
Further reading	18
2 How Can Genetic Variation be Measured?	19
DNA sequence variation	19
DNA fragment size variation	32
<i>Restriction fragment length polymorphisms (RFLPs)</i>	32
<i>Variable number tandem repeats (VNTR)</i>	34
<i>DNA fingerprinting</i>	38
<i>Random amplified polymorphic DNA (RAPD)</i>	38
<i>Amplified fragment length polymorphism (AFLP)</i>	39
Protein variation	41
Phenotypic variation	45
Further reading	46
3 Genetic Structure in Natural Populations	47
What is a stock?	47
How are allele frequencies estimated?	48
What is the relationship between alleles and genotypes?	49
How do allele frequencies change over time?	51
How does population structure arise?	52
How are genetic markers used to define population structure?	53
Levels of genetic differentiation in aquatic organisms	56
Mixed stock analysis (MSA)	68
Conservation genetics	70
Further reading	71
4 Genetic Considerations in the Hatchery	73
Is there evidence of loss of genetic variation in the hatchery?	75

How do hatcheries affect heterozygosity?	77
How can we use genetic markers to identify hatchery-produced individuals?	81
<i>Identification to family level</i>	81
<i>Identification to population level</i>	81
Genome mapping	82
<i>How is a genome mapped?</i>	83
<i>How do we carry out linkage analysis?</i>	85
<i>The SALMAP project</i>	88
Identification of diseases	88
Further reading	89
5 Artificial Selection in the Hatchery	91
Qualitative traits	91
Quantitative traits	95
What kinds of traits are important?	96
Variance of a trait	97
How can we estimate narrow-sense heritability?	99
Correlated traits	104
What types of artificial selection are there?	105
What about realised heritabilities?	108
Setting up a breeding programme	108
Inbreeding, cross-breeding and hybridisation	110
Further reading	113
6 Triploids and Beyond: Why Manipulate Ploidy?	114
How is it done?	115
Production of gynogens and androgens	117
Identification of ploidy change	118
Triploids	119
Tetraploids	123
Gynogens and androgens	123
Further reading	125
7 Genetic Engineering in Aquaculture	127
The DNA construct	127
<i>The transgene</i>	127
<i>The promoter</i>	128
Transgene delivery	130
<i>Microinjection</i>	130
<i>Electroporation</i>	132
<i>Sperm-mediated transfer</i>	132
<i>Biolistics</i>	133
<i>Viral vectors</i>	133
<i>Lipofection</i>	133
Transgene integration	133

Detecting integration and expression of the transgene	134
So much for transgenics – what about cloning?	138
Genethics	138
Further reading	140
<i>Glossary</i>	141
<i>Index</i>	155
