Preface to the Second Edition xi

Preface to the First Edition xiii

1 Historical Overview of Soils and the Fitness of the Soil Environment 1

The Historical Background of Soil Ecology 1

Water as a Constituent of Soil 4

Elemental Constitution of Soil 9

How Soils Are Formed 9

Profile Development 11

Soil Texture 13

Clay Mineral Structure 15

Soil Structure 16

Soils as Suppliers of Ecosystem Services 20

Summary 20

2 Primary Production Processes in Soils: Roots and Rhizosphere Associates 23

Introduction 23

The Primary Production Process 23

Methods of Sampling 25

Destructive Techniques 25

The Harvest Method 25

Isotope-Dilution Method 28

Root-Ingrowth Technique 28

Nondestructive Techniques 30

Additional Sources of Primary Production 34

Symbiotic Associates of Roots 34

Mycorrhizal Structure and Function 36

Ecosystem-Level Consequences of ECM Function	37
Actinorhiza	38
Carbon Allocation in the Root/Rhizosphere	38
Carbon Allocation Costs of Development and Maintenance of Symbiotic Associations with Roots	42
Future Directions for Research on Roots and Mycorrhizal Function and Biodiversity	44
Summary	46

3 Secondary Production: Activities of Heterotrophic Organisms—Microbes 47

Introduction	47
Compounds Being Decomposed	48
Microbial Activities in Relation to Catabolism in Soil Systems	48
<i>Microbial Abundance and Distribution in Soil</i>	<i>53</i>
Techniques for Measuring Microbial Communities	57
<i>Direct Measures of Numbers and Biomass</i>	<i>57</i>
<i>Indirect Measures of Biomass</i>	<i>59</i>
Chemical Methods	59
The Chloroform Fumigation and Incubation (CFI) Technique	59
The Chloroform Fumigation and Extraction (CFE) Technique	60
Physiological Methods: SIR Technique	61
Additional Physiological Methods of Measuring Microbial Activity	61
Enzyme Assays and Measures of Biological Activities in Soils	63
<i>Direct Methods of Determining Soil Microbial Activity</i>	<i>66</i>
Soil Sterilization and Partial Sterilization Techniques	67
Conceptual Models of Microbes in Soil Systems	67
<i>Root–Rhizosphere Microbe Models and Experiments</i>	<i>67</i>
<i>Soil Aggregation Models</i>	<i>69</i>
<i>Models: Organism and Process-Oriented</i>	<i>74</i>
Summary	77

4 Secondary Production: Activities of Heterotrophic Organisms—The Soil Fauna 79

Introduction	79
The Microfauna	83

<i>Methods for Extracting and Counting Protozoa</i>	86
<i>Distribution of Protozoa in Soil Profiles</i>	87
<i>Impacts of Protozoa on Ecosystem Function</i>	87
The Mesofauna	89
<i>Rotifera</i>	89
Features of Body Plan and General Ecology	89
<i>Nematoda</i>	90
Nematode Feeding Habits	90
Nematode Zones of Activity in Soil	93
Nematode Extraction Techniques	94
<i>Tardigrada</i>	95
<i>Microarthropods</i>	98
Collembola	101
Families of Collembola	103
Population Growth and Reproduction	107
Collembolan Feeding Habits	107
Collembolan Impacts on Soil Ecosystems	108
<i>Acari (Mites)</i>	109
Oribatid Mites	111
Abundance and Diversity of Oribatid Mites	114
Population Growth	116
Oribatid Feeding Habits	116
Oribatid Impacts on Soil Ecosystems	119
Prostigmatic Mites	119
Mesostigmatic Mites	122
Astigmatic Mites	124
<i>Other Microarthropods</i>	128
Protura	128
Diplura	129
Microcoryphia	130
Pseudoscorpionida	130
Symphyla	131
Pauropoda	133
<i>Enchytraeidae</i>	133
The Macrofauna	141
<i>Macroarthropods</i>	141
Importance of the Macroarthropods	141
Isopoda	143
Diplopoda	145
Chilopoda	146
Scorpionida	147
Araneae	149
Opiliones	151
Solifugae	152

Uropygi	152
The Pterygote Insects	153
Coleoptera	154
Hymenoptera	159
Diptera	161
Isoptera	162
Other Pterygota	166
Gastropoda	167
Sampling Techniques for Gastropods	168
<i>Oligochaeta—Earthworms</i>	169
Earthworm Distribution and Abundance	170
Biology and Ecology	171
Influence on Soil Processes	176
Earthworm Management	178
Earthworm Sampling and Identification	179
General Attributes of Fauna in Soil Systems	181
Faunal Feedbacks on Microbial Community Composition and Diversity	182
Summary	184

5 Decomposition and Nutrient Cycling 187

Introduction	187
Integrating Variables	188
Resource Quality, Climate, and Litter Breakdown	190
Dynamics of Litter Breakdown	192
Direct Measurement of Litter Breakdown	194
Patterns of Mass Loss During Decomposition	201
Effects of Fauna on Litter Breakdown Rates	204
Nutrient Movement During Decomposition	206
Nutrient Cycling Links in Soil Systems	215
Role of Soil Fauna in Organic Matter Dynamics and Nutrient Turnover	216
Faunal Impacts in Applied Ecology—Agroecosystems	220
Applied Ecology in Forested Ecosystems	222
Summary	225

6 Soil Food Webs: Detritivory and Microbivory in Soils 227

Introduction	227
Physiological Ecology of Soil Organisms	229

Energy Available for Detrital Food Chains and Webs	231
Arenas of Interest	236
A Hierarchical Approach to Organisms in Soils	237
Future Research Prospects	241
Summary	246

7 Soil Biodiversity and Linkages to Soil Processes 247

Introduction	247
Biodiversity in Soils and Its Impacts on Terrestrial Ecosystem Function	247
Heterogeneity of Carbon Substrates and Effects on Soil Biodiversity	259
Impacts of Species Richness on Ecosystem Function	259
Models, Microcosms, and Soil Biodiversity	263
Experimental Additions and Deletions in Soil Biodiversity Studies	265
Problems of Concern in Soil Biodiversity Studies	266
Why Is Soil Diversity So High?	269
Biogeographical Trends in Diversity of Soil Organisms	269

8 Future Developments in Soil Ecology 271

Introduction	271
Roles of Soils in Carbon Sequestration	271
Roles of Soils in the Global Carbon Cycle	275
Problems in Modeling Soil Carbon Dynamics	279
Biological Interactions in Soils and Global Change	281
Ecology of Invasive Species in Soil Systems: An Increasing Problem in Soil Ecology	285
Soils and “Gaia”: Possible Mechanisms for Evolution of “the Fitness of the Soil Environment?”	289
Soil Ecology in the Third Millennium	293

9 Laboratory and Field Exercises in Soil Ecology 299

Introduction	299
Minirhizotron Studies	299
Principle	299

Description of a Minirhizotron	299
Installation of the Minirhizotrons	300
Observation and Recording	300
Getting Data from the Videotape	300
Tracing Technique	300
Automated Root Length Measures	301
Soil Respiration Studies	301
Principle	301
Materials and Supplies Needed	301
Procedure	302
Calculations	302
Litter Decomposition Studies	303
Principle	303
Litterbag Construction	304
Calculations	305
Analyses for Soil Microbial Biomass	305
<i>The Chloroform-Fumigation K_2SO_4-Extraction Method</i>	<i>305</i>
Principle	305
Preparation and Handling of Potassium Sulfate	306
Sample Preparation	306
Potassium Sulfate Extractions	306
Chloroform Fumigation	306
Chloroform Removal	307
Calculations	307
Sampling and Enumeration of Nematodes	308
Principle	308
Sampling Considerations	308
Sampling Tool and Precautions	309
<i>Nematode Extraction: Baermann Funnel Method</i>	<i>309</i>
Principle	309
Materials and Supplies Needed	310
Procedure	310
<i>Killing and Fixing Nematodes with Hot and Cold Formalin (5%)</i>	<i>311</i>
Materials and Supplies Needed	311
Procedure	311
Sampling and Enumeration of Microarthropods	311
Principle	311
<i>Methods for the Study of Microarthropods</i>	<i>312</i>
Sampling	312
Extraction of Microarthropods from Samples	313
Sample Sorting and Identification	315

Sampling and Enumeration of Macroarthropods	317
Principle	317
<i>Methods for Sampling Macroarthropods</i>	317
Sampling	317
Berlese or Tullgren Extraction	318
Flotation	318
Emergence Traps	318
Pitfall Trapping	318
Sampling and Enumeration of Earthworms	320
Principle	320
<i>Collection of Earthworms</i>	320
Passive Techniques	320
Behavioral Techniques	320
Indirect Techniques	323
<i>Identification of Earthworms</i>	323
Sampling and Enumeration of Enchytraeids	323
Principle	323
<i>Collection of Enchytraeids</i>	324
<i>Identification of Enchytraeids</i>	325
References	327
Index	375
